About

I'm a Marketing Artist based in Istanbul and a Graphic Design graduate of Istanbul Okan University. I started as a freelance designer across different industries, then moved into NFT gaming as a community manager and artist.

I later joined 7apps in mobile apps, first as a Marketing Artist and then as a Jr. Marketing Specialist, and helped take Banger: AI Cover Songs & Music to #5 in the US App Store Music category. At Voyager I spent two years making performance-driven ad creatives for mobile games across genres. Most recently at PlayableX I focused on AI-powered video and creative concepts for different game types. I like combining design, marketing, and AI into work that performs.
